

Need help with hail? Call Atlanta's hail repair experts for service at your shop!

Let us write the estimate!

770-630-1864

How to Write a PDR Hail Estimate

1. Determine predominant size of hail on vehicle (dime to half dollar or larger). (Dent size is measured to the FARTHEST outside edge of dent, not just the center!)
2. Examine every panel, counting the number of dents on each panel.
3. Remember, roof rails are separate from roof.
4. For each panel, find the panel listed on matrix, and move across to the right until you find the correct number and size of dents. Write the listed dollar amount on your estimate for this panel. (Example: Hood with 11 nickel sized dents will cost \$150 to repair with PDR)
5. Don't forget the additions at the bottom of the matrix. Many panel prices need to be multiplied by 1.25 to increase the cost! (If the previously mentioned hood was aluminum, multiply the \$150 by 1.25 for a total of \$187.50) Check panels for aluminum with a magnet!
6. Include listed R&I cost at far right of matrix for each panel (Example: Headliner must be removed to repair roof.) (Use quick list below for R&I if you don't have published times!)
7. Include any parts costs and R&R for damaged trim moulding.
8. Add up all panel prices, R&I, parts, and R&R.

R&I Quick List

Hood liners, trunk liners, tail lights, fender liners.....	\$25 each	Sunroof.....	\$100
Headlights, door liners, cowl.....	\$25 each	Rear hatch.....	\$100
Headliners - Sedans.....	\$125	TV.....	\$50
Headliners - SUVs & Vans.....	\$175	Luggage Rack.....	\$50
